

## CES 2019: Kuzzle to Showcase Expanded IoT Backend Solution to Reduce Product Time-to-Market by 40%

*Meet Kuzzle: Stand 50859 – Eureka Park from the 8<sup>th</sup> to the 11<sup>th</sup> of January 2019*

**Montpellier (France), January 2019** -- Kuzzle, a French publisher of an open source backend platform for mobile and Internet of Things (IoT), today announced their plans to showcase their expanded backend suite with ready-to-use advanced features at CES Las Vegas, January 8-11, at Eureka Park, stand #50859.

Kuzzle will present this year's latest and most advanced IoT and mobile features like geospatial search and geo-fencing. By 2020, [20 billion](#) connected objects will be active and will complete the 8.5 billion ones already installed in 2017. From energy and utilities to healthcare and smart buildings, Kuzzle's backend platform supports digital transformation by dramatically simplifying and accelerating application development, reducing product time-to-market by 40% while delivering seamless customer experience. The Kuzzle solution has been deployed for Biogen pharmaceuticals in the USA, William Reed Business Media in the United Kingdom, the EKO mobile bank of Credit Agricole, the SNCF Railway company in France and more recently, the European search engine Qwant.

*"The challenge today for companies is their ability to release digital products and services quickly in response to innovations led by more agile startups,"* explains Jacques Le Conte, CEO at Kuzzle. *"Kuzzle's backend drastically accelerates the time to market of IoT and mobile innovations by offering functionality that brings value to the end user, such as real-time notifications or device geolocation. With this framework, our goal is to provide businesses and organizations the same tools as those available to the big tech companies of today."*

The company's open source backend includes a scalable server, multi-protocol API that allow applications to run on multiple devices and platforms, an administration console, real-time data storage in a cloud database, advanced search (text, geospatial, facets, etc.), the ability to filter the data subscribed, geolocation, geofencing, mathematical functions, device provisioning, user authentication turnkey features and the ability to visualize data analytics in real time.

###

### **About Kuzzle**

Kuzzle is a French Tech start-up launched in 2015. It edits an installable and cloud-agnostic open source backend that allows the development of digital applications. The solution is equipped with advanced features for IoT and Mobile such as security and authentication, API and real-time data management, geolocation or geofencing.
